

Football Places Booking System (TeamPlayer)

Project Summary:

A football field booking platform where users can:

- View & book football places
 - Create & manage teams
 - Invite players or receive join requests
 - Schedule matches with team approvals
 - Get notifications for requests, approvals, and match updates
-

Key Modules & Features

1. User Management

- Register/Login (JWT-based auth)
- User roles: Player, Organizer, Admin
- Profile management

2. Place Management

- Admin creates/updates football places (location, place type, capacity)
- View available places with filters (location/date/time/type)
- Photo uploads

3. Booking System

- Check availability of place slots
- Book time slots
- Cancel/modify bookings within policy
- Show upcoming bookings in user dashboard

4. Team Management

- Create/manage teams (Organizer role)
- Send invites to players via email

- Players approve or reject invites
- Players can request to join a team
- Organizer approves/rejects requests

5. Match Scheduling

- Organizer selects place & time slot
- Organizer sets up the match and selects team members
- Players approve participation
- Match is confirmed when minimum required members approve

6. Notifications System

- Email notifications using Spring Mail
- Notify users for:
 - Booking confirmation
 - Match invitations
 - Team join requests
 - Approvals/rejections

7. Deployment

- Must deploy/run the project as a docker container.

Bonus Features (Stretch Goals)

- Admin dashboard for managing users/places/bookings
- Integrate FullCalendar to display:
 - Booked pitches
 - Upcoming matches
 - Team schedules
- Clickable events on FullCalendar to open match/booking details

ERD Description

1. User

- id (PK)
- username
- email
- password
- role (PLAYER, ORGANIZER, ADMIN)
- status (e.g., ACTIVE, INACTIVE)
- created_at

2. Team

- id (PK)
- name
- description
- created_by → FK to User(id)
- created_at

3. TeamMember

- id (PK)
- user_id → FK to User(id)
- team_id → FK to Team(id)
- role (MEMBER, ORGANIZER)
- status (PENDING, APPROVED, REJECTED)
- invited_by → FK to User(id)
- created_at

4. Place

- id (PK)
- name

- location
- place_type (e.g., 5-a-side, 7-a-side)
- image_url
- created_at

5. BookingMatch

- id (PK)
- place_id → FK to Place(id)
- user_id → FK to User(id) (who booked)
- team_id → FK to Team(id)
- start_time
- end_time
- status (CONFIRMED, CANCELLED, PENDING)
- created_at

7. MatchParticipant

- id (PK)
- booking_match_id → FK to BookingMatch(id)
- user_id → FK to User(id)
- status (INVITED, ACCEPTED, DECLINED)
- responded_at

8. Notification or Requests (Think how to do it??)
